

LLCG/VZN annotations

1. LC cT1N0 within the setting of
 # DIPNECH or MEN 1 syndrome
 # comorbidity condition
 # multifocal lung carcinoid
 may benefit from an initial follow up
 without treatment.

2. Lung sparing anatomic pulmonary
 resection together with lymph node
 dissection (as recommended by ESTS for
 NSCLC) is recommended, even in case of N2
 lymph node metastases [IV, B]
